SUMMARY

Software developer well-versed in systems ranging from large enterprise-wide financial programs to small scale embedded systems. Driven to implement robust, real-world solutions applicable to a wide range of situations while focusing on meeting and exceeding customer expectations. Strong knowledge in both software development and hardware engineering, providing a blend of both skill sets while implementing complex solutions. Brings a unique outlook and energy to new situations and environments providing valued solutions to a variety of customers.

CLEARANCE

Active Public Trust Clearance

May 2023

WORK EXPERIENCE

Software Developer

CACI International Inc.

Chantilly, VA

May 2023 – Present

- Modify and develop SQL scripts for conversion between government financial systems.
- Develop Python-Selenium-based Robotic Process Automation (RPA) software for automated testing of government financial software (Momentum).
- Utilize government-based Agile approach to efficiently iterate on customer requirements.
- Deploy and release solutions to client with minimal downtime and confirmed functionality.
- Test and maintain current and legacy systems to validate performance and compliance with current systems.
- Analyze client requirements and create necessary documentation for future development and integration.
- Work with experienced team members to design and modify existing workflows surrounding previous software solutions.
- Evaluate and implement new interface technologies to provide fresh and intuitive user experience.
- Develop Node-based GUI for Python backend in ReactJS.

Sales Associate and Print Specialist

The UPS Store

Manassas, VA

November 2020 – Present

- Manage Enterprise IT network and point of sales systems to handle high traffic with minimal downtime.
- Upgrade and install Point of Sale (POS) system to meet corporate guidelines.
- Supervise high volume print jobs and designed methods to efficiently manage multiple enterprise grade printers.
- Work in national and international logistics for major retail package services.
- Design and print customers personalized business advertisements.

SKILLS & ATTRIBUTIONS

Languages: Python, C/C++, Java, PL/SQL, MATLAB, VHDL, JS/Web, Bash

Software/Packages: MS Office, Adobe CC, Autodesk Inventor, Xilinx Vivado/Vitis, KiCAD, PSpice, Docker, Git, Jenkins, SQL Developer, Nginx/Apache, Node - ReactJS, OpenCV, Linux, Proxmox

Hardware Competencies: FPGAs, Microcontrollers, Elec. Testing Insts., Networking Devices

EDUCATION

George Mason University

Computer Engineering, BS

Fairfax, VA

Expected May 2025

- Notable Courses: Circuit Analysis I/II, Data Structures and Embedded Systems Programming, Continuous-Time Signals and Systems, Digital System Design, Operating Systems, Computer Organization, Embedded Systems, Computer Architecture, Linear Electronics, FPGA Design in VHDL, Microcontrollers

AWARDS & CERTIFICATIONS

AWS Cloud Practitioner Accreditation | June 2023

GMU Tech Talent Awards | Multiple Years

Keyboard Design

brianchill.us/#/Keyboard & <https://github.com/TrojanPinata/Model-B>

- Designed PCB for external manufacturing using chosen layouts, and configuration of all onboard components.
- Added functionality to existing firmware and documented changes/code on Github.
- Wrote bill of materials and chose cost effective components for design which were implemented into final product.
- Designed and manufactured ergonomic housing to contain assembly while remaining unique against other designs on the market.

Open-Source Macropad

brianchill.us/#/Macropad & <https://github.com/TrojanPinata/Macropad-Pico>

- Designed simple, easy to manufacture 3D printed case, printable on any 3D printer.
- Wrote firmware based on existing, widely used software to promote consistency between similar keyboards.
- Engineered PCB for cost effective production with alternatives to reduce reliance on third party manufacturing.

Drawing Robot

brianchill.us/#/PiDraw

- Developed program for decoding location instructions and drawing on custom designed hardware.
- Designed CAD model of all components for low material 3D printing and structural stability during high stress movements.
- Used OpenCV to process images and generate location instructions from input images.

Hardware-based Line Following Robot

brianchill.us/#/LineFollower

- Designed Opamp based platform to drive four motors - Controlled by photoresistor-LED, TX-RX design.
- Integrated low-budget off the shelf components into design to satisfy budget requirements.
- Designed and manufactured PCB by hand for faster design-manufacturing turn around.

Microcontroller Powered Video on OLED Screens

brianchill.us/#/Oled

- Developed software interface to transmit video over serial to off the shelf microcontrollers.
- Designed low-level bit compression scheme in order to compress bit data into a easy to transmit format.
- Used OpenCV to process video and compressed data for transmission and low-level playback.
